

Task 9

Task Title:

Build a Web Chat Interface for an AI Agent

Task Description

In this task, you will build a simple web application that allows users to interact with an AI agent through a chat interface.

Instead of using the terminal, you will create a user-friendly interface where the user can type messages and receive responses from the agent.

The system should connect the frontend (UI) with the backend (agent + LLM), demonstrating how real AI applications work.

Task Objectives

- Build a simple web interface
- Connect the interface to an AI agent
- Send user input to the backend
- Display AI responses in the UI
- Maintain conversation history

Task Scenario

Create a chatbot web app where:

1. User enters a message
2. Message is sent to backend
3. AI agent processes the request
4. Response is returned
5. Response is displayed in chat format
